

Quick Read: Pest Control

My Space will help to control the following pests, where they are found within the footprint of properties:

- Mice
- Rats
- Squirrels
- Cockroaches
- Wasps – also a concern in communal outdoor areas if they pose a potential risk to health and safety.

We will support you to contact your local authority to request pest control. If this service is not available in your area, we can commission pest control.

We will not act to control any of the following, which are not considered pests and may be protected:

- Foxes
- Bats
- Badgers
- Insects (but see the spotlight on bees, below)

If you need advice about insects in your home, please contact your housing support team, who can offer support and guidance.

Spotlight: Bees are not considered pests and cannot be killed. A registered beekeeper will be called out to remove honeybees. No action will be taken over masonry bees which are incapable of stinging us and bumble bees which are the least aggressive of the stinging insects.
